In the first screen of the Autocad the serial number is needed. Type your serial number and click generate. Select the license type that you need. Click on generate. Select the full installation. Click on get license keys. Click on Ok. Click on Yes in the message. Click on Next. A: In the past, Autocad used a proprietary program called Acutcad. This program is no longer supported by Autodesk. However, you can still run it if you have a valid serial number and a valid account. I had a similar issue, but in my case it was due to a change in Autocad version. My serial number was stored in an old version of Autocad and it was failing the validation. I believe the previous version of Autocad 10 does not support the newer software and older versions will not validate the license, hence why my serial number was valid. The only real way you can validate a license is to re-install and re-activate Autocad. You can read more about it here. A: Autocad no longer requires registration of serial numbers.
