## Facebook Code Generator On Computer

Code Generator is a security feature for your Facebook app that is used with two-factor authentication. When you turn it on, your phone will generate a . apk file that you can download and install on your phone or tablet. This file is the passcode that you enter every time you use the Facebook app again. This access code cannot be intercepted and compromised. It can change, but it cannot be changed. This is a secure passcode. However, the passcode will only be available for a few seconds, so if you forget your passcode, you won't be able to open Facebook.
