I just want to share with you what IÂ . I've been trying to code my thoughts for a long time, and I have decided to release some of it. I had the idea to create an eye for "trolley" long before but never got started on it. Since I moved to Canada in 2001 I've been reading MIT lectures on Operating Systems. Those lectures inspired me to create the source code for the Intelicel. I also programmed a flat panel size viewer before I gave up, and I was thinking of making a dongle/shareware/premium program that creates graphite textures for 3D apps. The first step I took was to create the book pages and post them to Scribd and I found out that I like this way of creating things more than Photoshop, as I don't have to work that hard to impress people when my works are very old and I can see the result right away. I created 5 different pictures for the BlueMint reader. I didn't have to create any icons, because I already had the file with all the extra pages. In the book I write about the Intelicel, the BlueMint software, and most importantly about the social expectations put on technical projects. I think it is an important subject that is rarely taken into account, and it is easy to get discouraged by the limited response to your projects. The book will be available at Bluedoor Books on October 31st, 2007. Also I made an introduction for the book at Scribd.com. Feel free to check it out!1. Field of the Invention This invention is in the field of tools for use on workpieces such as planar workpieces that are not necessarily flat workpieces. More specifically, the invention is a machine using pneumatics and/or hydraulics f30f4ceada
