Multi Screen Dump Crack+ [Mac/Win]

The brain child of Merta (Vet Software Designer), Multi Screen Dump Crack For Windows is a utility that can capture either the entire screen or the active window. Once installed and launched, Multi Screen Dump opens the configuration screen that lets you choose one of the five supported formats, namely JPG, BMP, PNG, GIF or TIF. In addition, you can enable a beep on capture, apply a timestamp over the new snapshots, view the picture and capture mouse. A floating window is placed in the right bottom corner of the screen, letting you choose between the available screenshot taking modes. As said, you are allowed to capture either the entire screen, an active window or a user-defined area. Screenshots are automatically saved in a user-defined folder, without any impact on the overall stability of the system. Multi Screen Dump works flawlessly on all Windows versions and doesn't require more than average computer skills. It however lacks some very important features as compared to the other products in this particular software category, including hotkey configuration to allow users to set their very own keyboard shortcuts. There are some predefined hotkeys, all of them displayed when you launch the app. What's more, the floating window may become annoying after a specific period of the time, but due to the lack of customizable hotkeys, users have no other choice than to keep it always on top. Overall, Multi Screen Dump is a nice project, but it needs certain revisions in order to become much more user-friendly. In addition, it needs many more options for a greater customization power. #49,472 of 500,000 downloads and still going. 839 users added in the last year!
