Unrealsense Unrealsense is a freeware, portable program that detects the presence and orientation of the camera over a certain distance and save the images in the folder of your choice. It runs in stealth mode: it doesn't display any message or window at the background, but it's still capable of detecting the presence of a camera and saving the images in your preferred folder. The only available configuration is the time interval between images, which should be around 1 to 10 seconds. You can specify the minimum and maximum distance, as well as the number of images to be captured. The best thing is that the application is available for both Windows and Linux platforms, and it doesn't require installation. It's worth noting that if you don't have the webcam, the application will still work. However, it might be difficult to detect and use the image. It's worth mentioning that Unrealsense is free and it doesn't include any hidden costs or functions. However, it doesn't offer support for other webcam applications, such as Windows Live Messenger or Google Chrome. Evaluation and conclusion While Unrealsense is a powerful and free tool for analyzing the photos that you don't want to miss out on, it's not a universal imaging application. It might not offer the best quality possible, as it doesn't have a professional lens, but it's still capable of detecting the webcam at a certain distance, and you have an option to adjust the image quality. However, with the company's refusal to set an acceptable limit for the amount of data that is stored at its data centers, Bing's privacy policies changed in 2014. Now, it lacks end-to-end encryption, it's less secure, and you can't access your Bing account. If you're not happy with those changes, then you can go for an alternative to Microsoft's search engine. The Bing download doesn't require installations. Instead, it works via the internet, being able to select your region and operating system
