SkyORB SkyORB is a space simulation and star gazing utility, It's the most complete space simulation app available. SkyORB covers most important aspects of space exploration. It's a great 3D planetarium in more than 110 000 stars and galaxies and over 1800 images of space objects. SkyORB has a powerful, full featured, search engine and an accurate ephemeris, available in 3D mode. SkyORB features a fast 3D view, with clouds, transparency, and super-resolution. SkyORB also includes a 2D star chart and a sun clock. SkyORB can quickly calculate your position, date, and time, and generate a 3D view of the sky and any planet in its path. SkyORB includes a powerful time-tag feature. In addition to all this, SkyORB

includes a powerful 3D star map with clouds and transparency, when expanded to view the complete sky. SkyORB covers most important aspects of space exploration, including 3D star map, 3D planetarium, 3D view, 3D search engine, sun clock and so much more. Beside these, SkyORB features a rich user interface, with many options to personalize the presentation and the tools. This includes the capability to change your location or date, and to play the star map in more than 110 000 stars and galaxies or in dark constellations. It also includes the ability to use over 1800 images of space objects to browse. The sky map uses file-based resolution independence. It means that you can zoom and see more stars, galaxies and constellations from the whole sky. It means that it takes very less space and use less

memory and CPU than if you have to use smaller (physical) resolution images. The resolution and size of the sky map is only limited by your computer power and memory. SkyORB is a very powerful tool to explore, use and play with. It's the most complete space simulation app available SkyORB includes 3D planetarium in more than 110 000 stars and galaxies, as well as over 1800 images of space objects. It's a great 3D planetarium in over 100 galaxies with stars and planets SkyORB includes a powerful, full featured, search engine and an accurate ephemeris. SkyORB also includes a fast 3D view with clouds, transparency and super-resolution SkyORB can

What's New In SkyORB 2011?

SkyORB is a space simulation and star gazing

utility. SkyORB is more than a simple star map, it's a collection of 6 tools including a 3D star map, 3D planetarium, ephemeris, search engine, sun clock and more.

Developed since 2002, SkyORB is now entirely rewritten for better performance and user experience. Features resolution independance (480x320 to 1920x1080) and HDR bloom. Also features time and location customisation. Galaxy S6 Edge - Stylish and thick The Galaxy S6 Edge is Samsung's take on the Galaxy Note Edge, without the small phablet and without that protruding screen. Instead, it has a subtle curve on the sides. I'm not a fan of Samsung's default camera app, so I'll be using the one provided by XDA member xcolt25. It's not perfect, but it's the stock app and it's free. Please give it a thumbs up if you find this video helpful!

(Non-US version of the S6 Edge,
international model, UK carrier network)
