### What's New in the Photoshop 2021 (Version 22.4.3)?

The number of people who die each year from drug overdoses is well over 100,000, and is expected to continue to climb. The rise is attributed to an upsurge in powerful synthetic opioids like fentanyl, which can be delivered in pill form. In response, several states, including California, Connecticut, Florida and Oregon, have taken to putting strict prescription limits on opioids in an effort to fight back against the opioid epidemic. These limits serve two main purposes: First, reducing the amount of opioids doctors prescribe for each patient, and second, reducing the amount of opioids that actually get into the hands of recreational users. Sometimes, however, doctors find that the standard limits prevent patients who truly do need the pain treatment from getting it. Here's how it works: Let's say a doctor prescribes a person 10 60-milligram tablets of a generic opioid pill for back pain (which is prescribed in half-doses of 30 milligrams per tablet). A person trying to get the medication in the U.S. would then have to buy 10 times more than they would in Canada. A person in Canada would likely need to buy 14 pills, because Canada has a different limit on prescription strength (80-milligram pills) compared to the U.S. (60-milligram pills). The impact of this is that an opioid user in the U.S. is up to twice as likely to have their drug supply disappear if they live in an area where the prescribed pain killer limit is 80 milligrams, according to a study published in Annals of Internal Medicine in May. In order to protect patients and reduce opioid diversion, a growing number of states are imposing some limits on the total amount of prescription opioids that a doctor is allowed to write. States are often focusing on preventing people who take the drugs for recreational purposes or to get high from getting the drugs, and are less concerned about a patient who is legitimately in need of a higher dosage for pain. So, this person in the U.S. who takes 10 times more pills than someone in Canada won't take as much opioids as they could if they were in Canada. But it's still more than enough to get high. Rather than imposing limits on the number of pills a doctor is allowed to prescribe, or the total amount of opioids a patient can take, some states are going for a different approach, which is to limit
