As with many other Autodesk products, AutoCAD's tools vary in complexity. Some are highly specialized and powerful, while others are simple and fast. The following is a list of the most common tools for working with AutoCAD's drawing features:

Scribble or text objects Tools for working with the text and/or drawing object properties It is important to know how to work with the text and drawing objects when editing a drawing. The text object is used to add text to the drawing, whereas the drawing object is used to create paths, shapes and the like. In order to edit drawing objects, you first need to create them. There are two methods of creating text and drawing objects. The first is to type the desired text or shape, and then manually select it. You can do this in a couple of ways. You can select the type of text you want, such as FONT, TEXTFONT, or both. To select a font, you can hold the CTRL key down while selecting a font from the drop-down list. Alternatively, you can choose a font from the FONT command, which lets you select a font based on its file name. You can also pick a font by clicking on the font from a list. To add text, hold the SHIFT key down and click on the object you want to add text to. You can also pick a text style, such as COLOR, STYLE, or BOLDSTYLE. To create a drawing object, you click on the object and drag it to where you want it to be on the screen. To add a path to a drawing, you first need to create it. You can do this by clicking and dragging with the mouse. In order to add more than one path, you can drag one path out of the way, or you can place points along a line by clicking and dragging. To edit a path, you need to click on the right mouse button on the object you want to edit, which brings up a dialog box. From this box, you can change the points and the paths the path covers
