Step into the ultimate brain-challenge with Cognizer: The application allows you to experiment with shapes and colours. A combination of symbols and colours is placed on the scene at random, before each new level. While the level of difficulty gradually rises, you are given a limited time, to find the symbols as they appear on the scene. Using the touch screen, you can tap and click to look around the scene and find the right combination of symbols and colours. Your success will be detected by the ambient sounds of dub techno. The app is completely free, which means no locked content, no in-app purchases and no ads! Gameplay Tips: While you are playing, explore the 3 levels of difficulty (Normal, Medium and Hard). There are 5 steps per level, 1 on the lowest level, 2 on the middle level, and 3 on the top level. And remember: You only have a limited amount of time to find all the symbols. About Dub Techno: Dub Techno is a dark electronica style of music, mainly played at techno events. Made by San Francisco based Electronic Music Producer DJ Inks. About The Author: Cognizer was created by the team behind the award winning optical recognition app, Bopis. With an array of brain-stretching puzzles, including classic logic puzzles, a tic tac toe game, a sudoku, and popular classic words games, Cognizer is sure to keep any puzzle enthusiast busy! - Herb Pedersen, a groundbreaking expert on human development who died on May 15 at age 87, is known in the world of psychology for his groundbreaking efforts to create the Grofian model of psychotherapy. Working at his home in Spring Grove, Pa., for over 30 years, he advanced the revolutionary concept that psychoanalysis must be deeply integrated with insights gained from classical and empirical investigations into the science of mind and brain. It was only when he embraced his own insights about consciousness that he was able to make significant contributions to the field of psychotherapy. Known for his accurate, analytical insights into therapeutic processes, Pedersen's latest book, *Consciousness: Conceptual and Empirical Foundations*, was published posthumously to coincide with the 23rd annual North American Association for

the Psychoanalytic Psychology conference (NAAPP), which will be held at the University of Massachusetts Medical School from July 7-9. Pedersen's revolutionary rethinking of consciousness was based on a rigorous experience with meditation in his early 30s that led to a radical shift in his personal understanding of consciousness and, ultimately, his model of psychotherapy. These concepts, he had to learn from experience, for there were no published accounts of these phenomena in psychology or neuroscience. These experiences had much to do with his fascination with consciousness and his coming to know his mind: "These insights came as a fruit of a long gestation," he said in a 2005 interview with Canna Walsh, a Jungian analyst and his long-time student. "The best way I can describe what I think of consciousness is that it allows one to be aware of the knowing. The knowing is the living being-consciousness. It allows one to be aware of one's self and what others are aware of at any given time. It is a unique consciousness that allows one to be aware and recognize the uniqueness of any c9d1549cdd
