Fantasy Grounds is a freeware role-playing game authoring system. It is a powerful, easy to use, and powerful toolkit for creating D&D games or other role-playing games. We developed the product to be easy to use and most importantly, to be open. There is no vendor lock-in, and no money lock-in. You can try out Fantasy Grounds free of charge, if you're interested in buying a license, it is easy to register and get your free version and then upgrade to the paid version. The free version is less powerful and the license is for 5 projects (one for each project you make with Fantasy Grounds). If you make other projects besides D&D, you must purchase another license. For new users, we suggest you start with the free version and then you can register for a license later when you want to make more projects with Fantasy Grounds. Fantasy Grounds is an idea generator. Before you start your project, you can test out your idea and get direct feedback from your players. You can make two different tools to do this: Roleplay vs Campaign vs What-If (gist). And, you can run your role-playing sessions on the site you make with Fantasy Grounds. We created Fantasy Grounds to help save time, and by running the game on the

site, you'll get direct feedback from your players. Here is how to use the different features of Fantasy Grounds to make amazing role-playing games or setting ideas.

The Roleplay vs Campaign tool is one of the most important tools in Fantasy Grounds. The idea behind Roleplay vs Campaign is to quickly and easily run a small "gist" or short role-playing session without spending a lot of time. You can write down your basic story, in an easy to read and edit.txt format, and then run your game on the site you create in the tool. The game runs on the site, in real time, without having to download and setup any modules or software. It works on computers or smartphones, and it's free and open source software. The Run Time Module is a component of Fantasy Grounds that creates a site (or a virtual table) where you can run all of the other tools, including the Roleplay vs Campaign. You can make a campaign for just about anything. Here are some examples of different "campaigns" you can run on the site: battlegrounds, character trainers, cinematic games,

## **5e Fantasy Grounds - Demon Cults and Secret Societies Game Preview**

by Shadercrumpets

I will be planning to produce a pre-build and ready for play demo for the next Demon Cult & Secret Society and the demo will initially be released on Tuesday August 30th 2016

---

I will not be releasing the actual 5e bundle right away. The private beta of the new content bundle is planned for Saturday, September 22nd 2016. That means I will be releasing the 5e bundle at least 2 weeks earlier than normal.

Instead of releasing a bundle with only 7 monster types like the old bundle, this bundle will have a total of 30 demon types ranging from Devils to Treasure hoarders. The plan is to add the other 13 types as the campaign continues. However I will be shooting for 16 demon types in the beginning and making sure everything is balanced and that the new types are no worse than the old ones. Most monsters will also have weapons, armor, traps, equipment, loot, and spells as normal. Notably bosses in the 18 levels will *not* share loot with the other monsters in the dungeon. They will have a whole unique set of equipment and loot. This

**Tower RPG Maker MV - Fantastic Buildings: Medieval Tower Tower**

**Game Definition: There's nothing like going back in time to play a game that can be played in the perfect conditions. First, you're not stowed away in a cave; you're not wandering around in the woods (at least, not in the same world your heroes belong to); and rather than slinking around getting in the way, your enemies simply stand out in the clear, in glorious 40x40x20 graphics. But, of course, not many games stay so locked in time. They run dated quickly. This is particularly true of console titles. Think of it this way: if we're looking at a Knight-mare, Fantasy Series game, it wouldn't be a day 5 of the adventure, or a month of it. It would be five years into the game. The map-making process the use of RPG Maker MV is actually quite easy. And it's refreshing to get some of what you become more accustomed to, the goofy elements. You don't need to spindle,**

---

either. Most of the game uses an array of the same buttons for standard commands. The shift allows you to build the stairs. Press Start, and that's a four-story building. The auto-rotate feature is used to adjust the castle to the position of the camera. Most of the game features a similar interface. By building the walls, you'll automatically be able to place the next 'layer' in the castle. When you have the bases in place, then you can build the platforms over the walls, and it's moving time. You'll have to walk around and deal with the guard patterns in the process. Flying NPCs are mainly for resource gathering, and to be used to reach otherwise inaccessible places. Map Building and RPG Maker MV Being perfectly aware that China is not as comfortable with space games like the Fallout series, Fantastic buildings puts a good enough amount of effort to make travelling around the castle interesting, and not just finding the next lumberjack. Good character growth and dialogue play out the story you know to well, but the game gives what it does best. Like, you don't have to be a gamer to like the game; it's just good enough to give you a good dose of cinema. The game, while simple
