See the 2020 AutoCAD overview for key facts and statistics, such as user demographics, future trends, and more. Dimensional Modeling The Dimensional Modeling (DM) functionality of AutoCAD is a feature that allows users to create dimension-based drawings that are a combination of dimensional and topological objects. DM creates linear models that can have different topological characteristics and are joined by linear and/or dimension lines. The main purpose of DM is to allow users to join topological and dimensional objects as if they were real dimensional objects. DM allows users to create their own DM symbols or use available symbols, which make it easier to distinguish between the two. DM has many advantages over traditional topological and dimensional models, such as providing a more robust and consistent user experience. It allows designers to enter coordinate values and automatically creates topology and dimensions, whereas traditional topology and dimensional modeling require users to manually enter values and create new objects. See the 2020 AutoCAD overview for key facts and statistics, such as user demographics, future trends, and more. Productivity Power Tools Productivity Power Tools in AutoCAD 2020 is a collection of new features that improve the productivity of CAD users. A picture is worth a thousand words, and the 2020 Productivity Power Tools feature video explains how they can improve the way that CAD designers and drafters work. Tool Palettes Tool palettes in AutoCAD 2020 are categorized by type, such as drawing, drafting, modeling, and presentation. Tool palettes are designed to be customizable and can be added or removed, as required. With the exception of the printing palette, the tool palettes do not appear in the start menu. Top Top, a new feature in AutoCAD 2020, allows users to quickly access CAD commands, find help, search the online resources, launch a website, or provide support. See the 2020 AutoCAD overview for key facts and statistics, such as user demographics, future trends, and more. Enhanced Integrated Tools Enhanced Integrated Tools feature is AutoCAD's contribution to Industry 4.0. By connecting CAD to real-time information from the cloud, it can support real-time collaboration on mobile and web apps and provide access to real-time, cloud-based documents. The following table summarizes some of the benefits. Real-time status. With Enhanced Integrated Tools, users can see the status of the
