Technical Field The present invention relates to a pneumatic tire, in particular, a heavy duty pneumatic radial tire. More particularly, this invention relates to a heavy duty pneumatic radial tire having a large aspect ratio, capable of improving an aspect ratio strain strain and an aspect ratio strain energy absorption capacity. 2. Background Art In the recent years, a heavy duty radial tire has been demanded that is capable of rolling on rough roads and running a longer mileage. As a conventional example for solving this problem, there is known a pneumatic tire having a belt of a double belt structure formed by a circumferential belt and a lateral belt. Also, the following pneumatic tire is disclosed (see Patent Literature 1): In this conventional pneumatic tire, the circumferential belt has ribs formed at an outer circumferential side and has a large number of belt reinforcement plies crossing the ribs, and the lateral belt has slant ribs extending axially outward from the circumferential belt at
