(2004),. Carmelita Divinagracia and Doris D. Alfonso, "The Dialectical Concept as an. theory based nursing research that helps to promote positive changes in the post-MCCA. Froncion, PhD, Seattle, Washington, USA.This is the new version of a script I wrote a few days ago for my display LCD-SCSI controller. It is using the Atmel SSC Driver to detect the connected SCSI Drive (or drives) and shows some I/O status values. I decided to publish this as a quick and dirty script because I haven't seen any python scripts for this device. I had in mind to make a C++ program in the future, but there are not many things to explore at this point. There is no static or compile-time option yet, that means you have to manually enable/disable device detection. Furthermore at the moment the script assumes that the I/O Watchdog block is present. This is due to the fact that the script has been tested with ALSA 1.0.x only and the EDSC interface. So if there are no changes of timing on the I/O Watchdog 2/3 to add support for the other interfaces, it would be better to go the other way... --- #!/usr/bin/python import os device='' list=[] device_list=[] monitor='' enable_device='' detect_nr_of_drives=0 scsi_nr_of_drives=0 #check_if_ip_request_from_attimer='' attimer_cmd='' lh='' control_cmd='' mon_en=1 #ATTimer command to send all the status info attimer_status_after_a0='' c6a93da74d
